MÜCAHİT DÖNMEZ

SOFTWARE ENGINEER

PERSONAL PROFILE

To have a career opportunity that will improve my education and career in the short term. Adding value to the company and myself in the long run.

WORK EXPERIENCE

HUAWEI | May 2023 - Oct 2025

I started my journey at Huawei as a Java Backend Engineer by working on a platform where I used Feign Clients in Spring to integrate with existing APIs. I developed RESTful APIs that performed automated operations and applied business-specific logic for efficient data handling.

In my second project, I contributed to the backend of another platform by implementing client-specific APIs with a focus on scalability, performance, and maintainability.

TURKCELL | Dec 2021 - Nov 2022

As part of an innovative R&D project, I utilized Python with Elasticsearch to analyze and filter large-scale datasets. To enrich the insights, I leveraged Neo4j and crafted Cypher queries to visualize complex data relationships, contributing to more effective decision-making through graphical representations.

Internship

TURKCELL | Aug 2021 - Sep 2021

I worked in the field of Data Visualization in the Cyber Security department. I learned basic HTML and JavaScript as well as dealing with D3.js from Data Visualization tools

EDUCATIONAL HISTORY

University Graduate

Marmara University | Sep 2017 - Sep 2022

Electrical - Electronics Engineering(%100 English) / 3.01

High School Graduate

Dolapoğlu Anadolu Lisesi | Jun 2017 / 92.68

PROJECTS

Java GUI- Managing a team of maximum 100 people; giving people assignments with deadlines and importance values, managing how a work is shared.
